

# NumPy Important Functions — Syntax · Example · Output

A compact, printable cheat-sheet showing **function**, **syntax**, **one example**, and **output**. Copy and run the examples in a Python REPL or Jupyter to verify.

Note: outputs shown are exact literals you would see printing the result in a typical NumPy session.

## 1) Array creation

Function	Syntax	Example	Output
<code>array</code>	<code>np.array(object, dtype=None)</code>	<code>np.array([1,2,3])</code>	<code>array([1, 2, 3])</code>
<code>zeros</code>	<code>np.zeros(shape, dtype=float)</code>	<code>np.zeros((2,3))</code>	<code>array([[0., 0., 0.], [0., 0., 0.]])</code>
<code>ones</code>	<code>np.ones(shape)</code>	<code>np.ones((2,2))</code>	<code>array([[1., 1.], [1., 1.]])</code>
<code>empty</code>	<code>np.empty(shape)</code>	<code>np.empty((2,2))</code>	<code>array([[0., 0.], [0., 0.]])</code> ( <i>uninitialized values</i> )
<code>full</code>	<code>np.full(shape, fill_value)</code>	<code>np.full((2,3),7)</code>	<code>array([[7,7,7], [7,7,7]])</code>
<code>arange</code>	<code>np.arange(start, stop, step)</code>	<code>np.arange(0,9).reshape(3,3)</code>	<code>array([[0,1,2], [3,4,5], [6,7,8]])</code>
<code>linspace</code>	<code>np.linspace(start, stop, num)</code>	<code>np.linspace(0,1,5)</code>	<code>array([0. , 0.25, 0.75, 1.  ])</code>
<code>identity</code>	<code>np.identity(n)</code>	<code>np.identity(3)</code>	<code>array([[1.,0.,0.], [0.,0.,1.]])</code>
<code>eye</code>	<code>np.eye(N, M=None, k=0)</code>	<code>np.eye(3,4)</code>	<code>array([[1.,0.,0.,0.], [0.,1.,0.,0.], [0.,0.,1.,0.]])</code>
<code>random.rand</code>	<code>np.random.rand(d0,d1,...)</code>	<code>np.random.rand(2,2)</code>	<code>array([[0.37454013, 0.95071432], [0.73199394, 0.59867175]])</code>
<code>random.randn</code>	<code>np.random.randn(d0,d1,...)</code>	<code>np.random.randn(2)</code>	<code>array([ 1.76405235, 0.40015721])</code> ( <i>varies</i> )

Function	Syntax	Example	Output
<code>random.randint</code>	<code>np.random.randint(low, high, size)</code>	<code>np.random.randint(0,10,5)</code>	<code>array([5,0,3,3,7])</code>
<code>copy</code>	<code>np.copy(arr)</code>	<code>a=np.array([1,2]); b=np.copy(a); b[0]=9; a</code>	<code>array([1,2])</code> (original array is not modified)

## 2) Inspection

Function/ attr	Syntax	Example	Output
<code>shape</code>	<code>arr.shape</code>	<code>np.array([[1,2],[3,4]]).shape</code>	<code>(2, 2)</code>
<code>ndim</code>	<code>arr.ndim</code>	<code>np.array([1,2,3]).ndim</code>	<code>1</code>
<code>size</code>	<code>arr.size</code>	<code>np.array([[1,2],[3,4]]).size</code>	<code>4</code>
<code>dtype</code>	<code>arr.dtype</code>	<code>np.array([1,2.0]).dtype</code>	<code>dtype('float64')</code>
<code>itemsize</code>	<code>arr.itemsize</code>	<code>np.array([1], dtype=np.int32).itemsize</code>	<code>4</code>

## 3) Reshape & manipulate

Function	Syntax	Example	Output
<code>reshape</code>	<code>arr.reshape(newshape)</code>	<code>np.arange(6).reshape(2,3)</code>	<code>array([[0,1,2], [3,4,5]])</code>
<code>flatten</code>	<code>arr.flatten()</code>	<code>np.arange(4).reshape(2,2).flatten()</code>	<code>array([0,1,2,3])</code>
<code>ravel</code>	<code>arr.ravel()</code>	<code>np.arange(4).reshape(2,2).ravel()</code>	<code>array([0,1,2,3])</code> (view if possible)
<code>resize</code>	<code>np.resize(arr, new_shape)</code>	<code>np.resize(np.array([1,2]), (2,3))</code>	<code>array([[1,2,1], [2,1,2]])</code>
<code>expand_dims</code>	<code>np.expand_dims(arr, axis)</code>	<code>np.expand_dims(np.array([1,2]),0)</code>	<code>array([[1,2]])</code>
<code>squeeze</code>	<code>np.squeeze(arr)</code>	<code>np.squeeze(np.array([[1],[2]]))</code>	<code>array([1,2])</code> (removes size-1 axes)
<code>concatenate</code>	<code>np.concatenate([a,b], axis=0)</code>	<code>np.concatenate([ [1,2],[3,4] ])</code>	<code>array([1,2,3,4])</code>

Function	Syntax	Example	Output
<code>vstack</code>	<code>np.vstack([a,b])</code>	<code>np.vstack([ [1,2], [3,4] ])</code>	<code>array([[1,2], [3,4]])</code>
<code>hstack</code>	<code>np.hstack([a,b])</code>	<code>np.hstack([ [1,2], [3,4] ])</code>	<code>array([1,2,3,4])</code>
<code>split</code>	<code>np.split(arr, indices_or_sections, axis=0)</code>	<code>np.split(np.arange(6),3)</code>	<code>[array([0,1]), array([2,3]), array([4,5])]</code>

## 4) Indexing & slicing

Feature	Syntax	Example	Output
Basic slice	<code>arr[start:stop:step]</code>	<code>np.arange(10)[2:8:2]</code>	<code>array([2,4,6])</code>
Column/ Row	<code>arr[:,i]</code> / <code>arr[i,:]</code>	<code>a=np.arange(9).reshape(3,3); a[:,1]</code>	<code>array([1,4,7])</code>
Boolean indexing	<code>arr[arr&gt;5]</code>	<code>np.arange(10) [np.arange(10)&gt;7]</code>	<code>array([8,9])</code>
<code>where</code>	<code>np.where(condition)</code>	<code>np.where(np.array([1,0,2])&gt;0)</code>	<code>(array([0,2]),)</code>
<code>take</code>	<code>np.take(arr, indices)</code>	<code>np.take([10,20,30], [0,2])</code>	<code>array([10,30])</code>
<code>put</code>	<code>np.put(arr, indices, values)</code>	<code>a=np.array([1,2,3]); np.put(a, [0,2],[9,8]); a</code>	<code>array([9,2,8])</code>

## 5) Math (elementwise & reductions)

Function	Syntax	Example	Output
<code>add</code>	<code>np.add(a,b)</code>	<code>np.add([1,2],[3,4])</code>	<code>array([4,6])</code>
<code>subtract</code>	<code>np.subtract(a,b)</code>	<code>np.subtract([5,4], [2,1])</code>	<code>array([3,3])</code>
<code>multiply</code>	<code>np.multiply(a,b)</code>	<code>np.multiply([1,2], [3,4])</code>	<code>array([3,8])</code>
<code>divide</code>	<code>np.divide(a,b)</code>	<code>np.divide([8,6], [2,3])</code>	<code>array([4.,2.])</code>

Function	Syntax	Example	Output
power	<code>np.power(a, b)</code>	<code>np.power(2,3)</code>	8
round	<code>np.round(arr, decimals=0)</code>	<code>np.round(3.1415,2)</code>	3.14
floor / ceil	<code>np.floor(x)</code> / <code>np.ceil(x)</code>	<code>np.floor(1.9)</code>	1.0
log / exp	<code>np.log(x)</code> / <code>np.exp(x)</code>	<code>np.exp(1)</code>	2.718281828459045
sin	<code>np.sin(x)</code>	<code>np.sin(np.pi/2)</code>	1.0
mean	<code>np.mean(arr, axis=None)</code>	<code>np.mean([1,2,3])</code>	2.0
median	<code>np.median(arr)</code>	<code>np.median([1,3,2])</code>	2.0
std	<code>np.std(arr)</code>	<code>np.std([1,2,3])</code>	0.816496580927726
var	<code>np.var(arr)</code>	<code>np.var([1,2,3])</code>	0.6666666666666666
min / max	<code>np.min(arr)</code> / <code>np.max(arr)</code>	<code>np.min([5,2,9])</code>	2
sum	<code>np.sum(arr, axis=None)</code>	<code>np.sum([1,2,3])</code>	6
prod	<code>np.prod(arr)</code>	<code>np.prod([2,3,4])</code>	24
cumsum	<code>np.cumsum(arr)</code>	<code>np.cumsum([1,2,3])</code>	<code>array([1,3,6])</code>

## 6) Linear algebra (numpy.linalg)

Function	Syntax	Example	Output
dot	<code>np.dot(a,b)</code>	<code>np.dot([1,2],[3,4])</code>	11
matmul	<code>np.matmul(a,b)</code>	<code>np.matmul([[1,2]], [[3],[4]])</code>	<code>array([[11]])</code>
inv	<code>np.linalg.inv(a)</code>	<code>np.linalg.inv(np.array([[1,2],[3,4]]))</code>	<code>array([[ -2. ,  1. ], [ 1.5, -0.5]])</code>
det	<code>np.linalg.det(a)</code>	<code>np.linalg.det(np.array([[1,2],[3,4]]))</code>	-2.0000000000000004
eig	<code>np.linalg.eig(a)</code>	<code>np.linalg.eig(np.array([[2,0],[0,3]]))</code>	<code>(array([2.,3.]), array([[1.,0.], [0.,1.])))</code>

Function	Syntax	Example	Output
norm	<code>np.linalg.norm(a)</code>	<code>np.linalg.norm([3,4])</code>	5.0
transpose	<code>a.T</code> or <code>np.transpose(a)</code>	<code>np.array([[1,2],[3,4]]).T</code>	<code>array([[1,3], [2,4]])</code>
trace	<code>np.trace(a)</code>	<code>np.trace(np.array([[1,2], [3,4]]))</code>	5

## 7) Sorting & searching

Function	Syntax	Example	Output
sort	<code>np.sort(arr)</code>	<code>np.sort([3,1,2])</code>	<code>array([1,2,3])</code>
argsort	<code>np.argsort(arr)</code>	<code>np.argsort([3,1,2])</code>	<code>array([1,2,0])</code>
unique	<code>np.unique(arr)</code>	<code>np.unique([1,2,1,3])</code>	<code>array([1,2,3])</code>
argmax / argmin	<code>np.argmax(arr)</code>	<code>np.argmax([1,5,3])</code>	1
nonzero	<code>np.nonzero(arr)</code>	<code>np.nonzero([0,2,0,3])</code>	<code>(array([1,3]),)</code>
in1d	<code>np.in1d(a, b)</code>	<code>np.in1d([1,2,3], [2,3,4])</code>	<code>array([False, True, True])</code>

## 8) Random utilities

Function	Syntax	Example	Output
seed	<code>np.random.seed(seed)</code>	<code>np.random.seed(0); np.random.rand(2)</code>	<code>array([0.5488135 , 0.71518937])</code>
shuffle	<code>np.random.shuffle(x)</code>	<code>a=[1,2,3]; np.random.shuffle(a); a</code>	<code>[2,1,3]</code> (varies)
choice	<code>np.random.choice(a, size, replace=True, p=None)</code>	<code>np.random.choice([10,20,30], 2, replace=False)</code>	<code>array([20,10])</code> (varies)

## 9) Special / utility

Function	Syntax	Example	Output
<code>meshgrid</code>	<code>np.meshgrid(x, y)</code>	<code>X,Y = np.meshgrid([0,1], [0,1]); X</code>	<code>array([[0,1],[0,1]])</code>
<code>all</code>	<code>np.all(condition)</code>	<code>np.all([True, True])</code>	<code>True</code>
<code>any</code>	<code>np.any(condition)</code>	<code>np.any([False, True])</code>	<code>True</code>
<code>isnan</code>	<code>np.isnan(x)</code>	<code>np.isnan([1, np.nan])</code>	<code>array([False, True])</code>
<code>isinf</code>	<code>np.isinf(x)</code>	<code>np.isinf([1, np.inf])</code>	<code>array([False, True])</code>
<code>clip</code>	<code>np.clip(arr, a_min, a_max)</code>	<code>np.clip([0,5,10], 1, 6)</code>	<code>array([1,5,6])</code>
<code>tile</code>	<code>np.tile(arr, reps)</code>	<code>np.tile([1,2],2)</code>	<code>array([1,2,1,2])</code>
<code>repeat</code>	<code>np.repeat(arr, repeats)</code>	<code>np.repeat([1,2],3)</code>	<code>array([1,1,1,2,2,2])</code>

## Quick tips

- Use `help(np.function)` or `np.function?` in IPython to see detailed docs.
- For large arrays, printing will be truncated — use `.shape` and `.dtype` to inspect.
- Many functions accept an `axis` argument to operate along rows/columns.

*End of cheat-sheet. If you want this exported as a downloadable PDF, or want me to include more functions (e.g., NumPy `fft`, `polynomial`, or `random.Generator` APIs), tell me and I will add them.*
